

Hawaiian Islands Bird Checklist – 2017

This is the official bird checklist of the Hawaiian Islands, which includes 338 species as of 2017 and is maintained by the Hawaii Bird Records Committee (VanderWerf et al. 2018). The “Hawaiian Islands” are herein considered to include all islands that are part of the State of Hawaii plus Midway Atoll, which is not part of the State of Hawaii but an unincorporated territory of the United States, and all waters within 370.4 km (200 nautical miles) of the coast of the Hawaiian Islands. The checklist includes all bird species known to have occurred naturally in the Hawaiian Islands and species introduced by humans that have established viable breeding populations in the wild for at least 15 years. It includes endemic species that have become extinct in historical times and introduced species that once had established breeding populations but are now extirpated, but it does not include species that are known only from fossils or subfossils.

Other bird species have been reported in the Hawaiian Islands but are regarded as hypothetical in occurrence because their identification was not certain, their natural occurrence was questionable, or, in the case of introduced species, the establishment of a viable breeding population was questionable. For a list of hypothetical species see Pyle and Pyle (2017). Taxonomy and order of taxa in this checklist follows that of the American Ornithological Society (AOS; formerly the American Ornithologists' Union [AOU]) Check-list (AOU 1998) and supplements through 2018 (Chesser et al. 2018).

The status and minimum form of documentation for each species are indicated by the codes listed just above the checklist. Species that have occurred in the Hawaiian Islands only on Midway Atoll are indicated in a separate column in order to provide a bird list for the State of Hawaii. Reports of species marked with an “X” in the column labeled “Review List” will be reviewed by the HBRC. Generally, these are species that have occurred in the Hawaiian Islands approximately five or fewer times in the past 10 years. To report a bird marked as a review species, email a [Rare Bird Report Form](#) to the chair of the Hawaii Bird Records Committee: Eric VanderWerf; ewerf@hawaii.rr.com.

Status codes:

- Be – Breeding Visitor endemic to Hawaii (occurs seasonally and breeds only in Hawaii)
Bi – Breeding Visitor indigenous to Hawaii (occurs seasonally and breeds in Hawaii and elsewhere)
Re – Resident endemic to Hawaii (resident in the Hawaiian Islands and does not occur elsewhere)
Ri – Resident indigenous to Hawaii (resident in Hawaii and also occurs elsewhere)
Rxx – Resident endemic to Hawaii, extinct in the wild (exists only in captivity)
Ir – Introduced, naturalized, non-native resident (currently established and breeding)

- Ix – Introduced, extirpated non-native (formerly established and bred)
 Vc – Common non-breeding visitor (migrates through or winters every year in large numbers)
 Vu – Uncommon non-breeding visitor (migrates through or winters every year in small numbers or locally)
 Vo – Occasional non-breeding visitor (visits or winters but not every year)
 Va – Accidental visitor (vagrant with ≤5 records)
 Xe – Extinct (formerly endemic to the Hawaiian Islands)
 E – Endangered species (listed as endangered under the U.S. Endangered Species Act)
 T – Threatened species (listed as threatened under the U.S. Endangered Species Act)

Documentation codes:

- P – Photograph, digital image, and/or digital video clip
 S – Specimen
 V – Visual (sight record) only
